Safety Considerations

Series BIS C-3_ _ processors along with the other BIS C system components comprise an identification system and may only be used for this purpose in an industrial environment in conformity with Class A of the EMC Law.

Installation and Operation

Installation and operation should be done by trained personnel only. Unauthorized access and improper use will lead to loss of warranty and guaranty.

When installing the read/write heads, pay close attention to the section containing connection diagrams.

Use and Checking

When using the Identification System, standard safety practices should be adhered to. In particular, measures must be taken to ensure that in case of failure of the Identification System no danger to persons or property can arise.

This includes maintaining the published ambient conditions and regular checking of the functionality of the Identification System with all the components associated with, and keeping inspection records.

Fault Conditions

If there is evidence that the Identification System is not operating properly, it should be taken out of service and protected from unauthorized use.

Validity

This description is valid for read/write heads in series BIS C-3_ _.

Introduction BIS C Identification System

This handbook is intended to guide the user during installation and startup of the components in the Identification System BIS C so that it can be brought into operation with a minimum of time and effort.

Principle

The Identification System BIS C belongs to the category of

non-contact operating systems which can be read as well as programmed.

This dual function permits applications in which not only fixed programmed information can be transported, but also up-to-date information can be collected on the data carrier and carried with it during the process.

Applications

A few of the more notable applications include

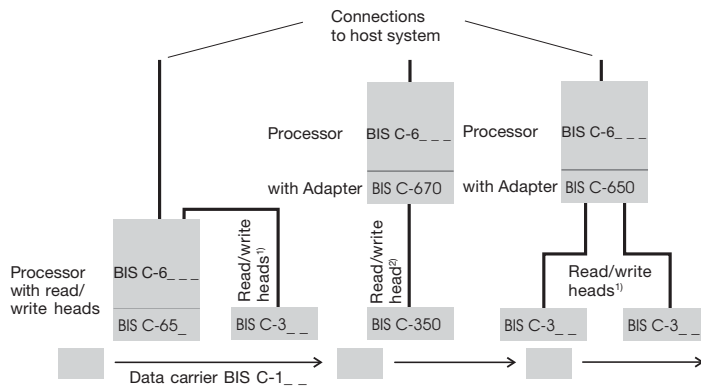

- **in manufacturing for controlling material flow**
e.g. in model-specific processes,
in workpiece transport with conveying lines,
for data gathering in quality assurance,
for gathering safety-relevant data,
- **tool coding and monitoring**
- **Production equipment organization;**
- **inventory for monitoring stock movement and levels,**
- **conveying and transporting technology,**
- **waste collection for quantity-based billing.**

Introduction BIS C Identification System

System Components

The main components of the BIS C Identification System are:

- Processor,
- Read/Write Heads and
- Data carrier.

Interaction Read/Write Heads and Data Carrier

Spatial Arrangement of Read/Write Head and Data Carrier

The key to reliable data exchange between the read/write head and the data carrier is maintaining sufficient dwell time of the data carrier within a specified spatial distance from the read/write head. The sketches on the two following pages are intended to clarify this requirement, in the first sketch for read/write heads with non-directional operation, in the second for read/write heads in cases where the data carriers have to pass by from a certain direction or at a certain orientation.

In **static read/write operation** the data carrier stops completely in front of the read/write head during the read/write process; this permits a greater distance between the two.

In **dynamic operation** the data carrier is read or programmed on the fly. A shorter distance is necessary in order to achieve as large a read/write range as possible.

Each read/write head has certain data carriers which can be used with it (the pairing is based on physical size and antenna field configuration). The associated specifications for distance and permissible offset are indicated as well as the distance and relative speed between the read/write head and the data carrier.

Interaction Read/Write Heads and Data Carrier

Selection Criteria Read/Write Heads Series BIS C-3_ _

Connection cable for Read/Write Heads

The cable length of the read/write heads may not be altered.
Exception: Read/Write Head BIS C-350-00,3.

Bending radius for cable

The cable connecting the read/write heads must maintain a least bending radius.
The least bending radius for PVC jacketed cable is 26 mm when static and 52 mm when dynamic.
The least bending radius for PU jacketed cable is 20 mm.
The special PU1 cable for continuously dynamic use requires a least bending radius of 34 mm.

Selection of Read/Write Head

All read/write heads can be used for static and dynamic reading (and writing). When selecting the optimal read/write Head, the following factors must be taken into consideration:
Mounting conditions, method of attachment and size, read/write distance.

Please use the following tables for orientation with respect to

- size,
- enclosure rating,
- attachment possibilities,
- distances,
- direction of approach and
- wiring considerations.

Selection Criteria Read/Write Heads Series BIS C-3_ _

Tabular Overview

The table lists read/write heads which can be flush **mounted in steel**. For notes on installing in aluminium, see ¶ 14. The read/write orientation may be any, since a round antenna form is used for these read/write heads.

Criteria	Types: ¹⁾ BIS C-300-__	C-306-__	C-302-__	C-305-__	C-315-__	C-325/_-S4	C-324/_-S4

BIS C-117.../A	60	$V_{dyn} + 65$	BIS C-133.../L	120	$V_{dyn} + 125$
BIS C-117.../L	120	$V_{dyn} + 125$	BIS C-150 with BIS C-351 or BIS C-653	270	$V_{dyn} + 275$
BIS C-121.../L	32	$V_{dyn} + 37$	BIS C-190.../L	120	$V_{dyn} + 125$
BIS C-121-04/L-SA1	32	$V_{dyn} + 37$	BIS C-191.../L	64	$V_{dyn} + 69$
BIS C-122.../L	32	$V_{dyn} + 37$			

The distance between two data carriers is defined as the free space between two data carriers of equal size. When the data carriers differ in size or when the read/write head is larger the distance of the larger device has to be applied.
For dynamic mode V has to be in [m/min].
For distances between read/write heads see previous page.

Installation in Aluminum

With Clear Zone, Static Operation

When installing the components in aluminum, provide clear zones for fault-free operation.

In static operation the depth of the clear zone in aluminum must be kept to at least 10 mm.
Fig. 1

Fig. 1

The clear zone dimension **A** corresponds to 2x the diameter of the larger communication partner plus 1x the diameter of the smaller communication partner (see specification for read/write head).
Fig. 2

Fig. 2

In combination with read/write heads BIS C-318, 327, 328, 350, 351 and 355 the dimensions **B** and **C** are calculated using the length and width of the larger communication partner (data carrier or read/write head) plus the maximum possible offset (see specification for read/write head).
Fig. 3

Fig. 3

Installation in Aluminium

With Clear Zone, Dynamic Operation

In dynamic mode the depth of the clear zone in aluminum must also be at least 10 mm. Fig. 1

The clear zone dimension **A** corresponds to 2x the diameter of the larger communication partner plus 1x the diameter of the smaller communication partner. The clear zone dimension **C** corresponds to the diameter of the larger communication partner plus the corresponding maximum offset (see specification for read/write head). Fig. 4

Fig. 4

In combination with read/write heads BIS C-318, 327, 328, 350, 351 and 355, dimension **B** is calculated as 2x the read/write travel (see specification for read/write heads) plus the width of the data carrier. The clear zone dimension **C** corresponds to the read/write head length plus the corresponding maximum offset (see specification for read/write head). Fig. 5

	Read	Write	Offset [mm] at a distance [mm] of							Distance [mm]	Vmax. [m/min] ¹⁾	
			1	5	10	20	30	35			Read	Write
non-flush	BIS C-108-_/L-SA2	0 to 6	0 to 6	± 8.5	± 5.5				100	5	120	70
	BIS C-108-_/L	0 to 7	0 to 7	± 9.5	± 6.5				100	6	120	70
	BIS C-117-05/L	0 to 7	0 to 7	± 9.5	± 8.5				100	6	120	70
	BIS C-127-05/L	10 to 35	10 to 35			± 25	± 20		80	20	100	60
	BIS C-128-_/L	7.5	7.5	± 11	± 8				100	6	120	70
	BIS C-190-_/L	8	8	± 11	± 10				100	5	120	70

¹⁾ The indicated relative speeds assume a read or write of the first 4 bytes of the data carrier (bytes 0...3).

Read/Write Head BIS C-351-__

Dimensions
Standard:
Length __
05 = 5 m
10 = 10 m

Distances and Velocities between Read/Write Head and matching Data carrier

Matching Data Carrier	Distance [mm]		Static Mode (V = 0)						Read-/Write range [mm]	Dynamic Mode (V > 0)		
	Read	Write	Offset [mm] at a distance [mm] of							Distance [mm]	Vmax. [m/min] ¹⁾	
			1	5	10	20	30	35			Read	Write
non-flush	BIS C-150-05/A	0 to 45	0 to 45			± 15	± 15		135 to 110	10 to 30	131 to 110	75 to 60
	BIS C-150-11/A	45	45			± 15	± 15		135 to 110	10 to 30	131 to 110	75 to 60
	BIS C-150-32/A	45	45			± 15	± 15		135 to 110	10 to 30	131 to 110	75 to 60

¹⁾ The indicated relative speeds assume a read or write of the first 4 bytes of the data carrier (bytes 0...3).

Read/Write Head BIS C-350-00,3

Dimensions
Standard:
Length
00,3 = 0.3 m
Compatible
connection cable ²⁾
for adapter BIS C-670

Distances and Velocities between Read/Write Head and matching Data carrier

Matching Data Carrier	Static Mode (V = 0)							Dynamic Mode (V > 0)				
	Distance [mm]		Offset [mm] at a distance [mm] of					Read-/Write range [mm]	Distance [mm]	Vmax. [m/min] ¹⁾		
	Read	Write	10	20	30	35	42			60	Read	Write
non-flush	BIS C-150-05/A	100	90	± 30	± 30			± 30	126/140	63/70	120	75
	BIS C-150-11/A	100	90	± 30	± 30			± 30	126/140	63/70	120	75
	BIS C-150-32/A	100	90	± 30	± 30			± 30	126/140	63/70	120	75

¹⁾ The indicated relative speeds assume a read or write of the first 4 bytes of the data carrier (bytes 0...3).
²⁾ BIS C-516-PU-__

Read/Write Head BIS C-355/05-S92

Dimensions
Standard:
Length
05 = 5 m
= Compatible
connection cable ²⁾
with 5 m length

For special requirements!
Using bar/double
antenna for increased
traverse speed

Distances and Velocities between Read/Write Head and matching Data carrier

Matching Data Carrier	Distance [mm]		Static Mode (V = 0)					Read-/Write range [mm]	Distance [mm]	Vmax. [m/min] ¹⁾			
	Read	Write	Offset [mm] at a distance [mm] of							Read	Write		
	0 to 40	0 to 35	10	20	30	35	42	260	1 to 35			220	150
non-flush	BIS C-150-05/A	0 to 40	0 to 35					± 15	± 5	260	1 to 35	220	150
	BIS C-150-11/A	0 to 40	0 to 35					± 15	± 5	260	1 to 35	220	150
	BIS C-150-32/A	0 to 40	0 to 35					± 15	± 5	260	1 to 35	220	150

¹⁾ The indicated relative speeds assume a read or write of the first 4 bytes of the data carrier (bytes 0...3).
²⁾ BIS C-520-PVC-05

Connection Cable for Read/Write Heads with S4 Connectors

Connection cable
BIS C-518-PVC-__
 With straight M12 connector on both ends

Connection cable
BIS C-517-PVC-__
 With one straight and one right-angle M12 connector

Connection cable
BIS C-506-PU-__
BIS C-506-PU1-__¹⁾
 With one straight and one right-angle M12 connector

Connection cable
BIS C-505-PU-__
BIS C-505-PU1-__¹⁾
 With straight M12 connector on both ends

Pin	Wire color	Function
1	BU	AH
2	BN	EH
3	Shield	GND
4	--	n/c

Ordering Code,
 Length __ :
 01 = 1 m
 05 = 5 m
 10 = 10 m

¹⁾ Drag-chain capable version

Additional Connection Cables for Read/Write Heads

Connection cable BIS C-512-PU-__¹⁾
 With 8-pin BKS S 45-00, connector and pigtail, for BIS C-35_ read/write heads or BIS C-901 converter to BIS C-480-...-E processor

Pin	Function	Wire Color
A	+ 24 V	BN
B	0 V	BU
C	Shield	
D	+ S in	WH
E	- S in	GN
F	free	
G	+ S out	GY
H	- S out	PK

Connection cable BIS C-516-PU-__¹⁾
 With the 8-pin BKS S 45-00 and BKS S 46-00 connectors

Connection cable BIS C-520-PVC-05
 With 5 m fixed length, for connecting BIS C-355/05-S92 read/write head to a processor using BIS C-654 adapter

¹⁾ Ordering code, cable length L = __: 05 = 5 m, 10 = 10 m ...
 The following lengths are available: up to 20 m: in 5 m increments,
 from 20 to 50 m: in 10 m increments and
 from 50 to 100 m: in 25 m increments.

Technical Information

CE Declaration of Conformity and user safety

CE This product was developed and produced considering the claimed European standards and guidelines.

You can separately request a Declaration of Conformity.
 Further safety measures you can find in chapter Safety (see ¶ 4).
